# PXI/DAQ/DAQe-2500 Series

# 4/8-CH 12-Bit I MS/s Analog Output Multi-Function DAQ Cards

#### Introduction

ADLINK's PXI/DAQ/DAQe-2500 series are high-speed and high-performance analog output multi-function DAQ cards able to update up to 8-CH, 12-bit analog outputs simultaneously while sustaining a 1 MS/s rate. The reference sources and the output polarities are programmable on a per channel basis. Combined with a multiplying DAC architecture, the ADLINK PXI/DAQ/DAQe-2500 series of DAQ cards can generate complex modulated analog signals.

The hardware-based arbitrary waveform generation reduces CPU loading even when all analog outputs are updating at full speed, and the lengths of waveforms are only limited by

The PXI/DAQ/DAQe-2500 series integrates up to 8-CH, 400 kS/s, 14-bit single-ended analog inputs with programmable polarity, 24-CH programmable digital I/O lines, and a 2-CH 16-bit general-purpose timer/counter.

The PXI/DAQ/DAQe-2500 series is able to perform analog input and output functions at full speed simultaneously and multiple cards can be synchronized through the SSI (System Synchronization Interface) bus or PXI trigger bus. The auto-calibration functions adjust the gain and offset to within specified accuracies such that you do not have to adjust trimpots to calibrate the boards.
